Design
We link functionality and aesthetics.

Security
We link systems to protection.

Service
We link speed to reliability.

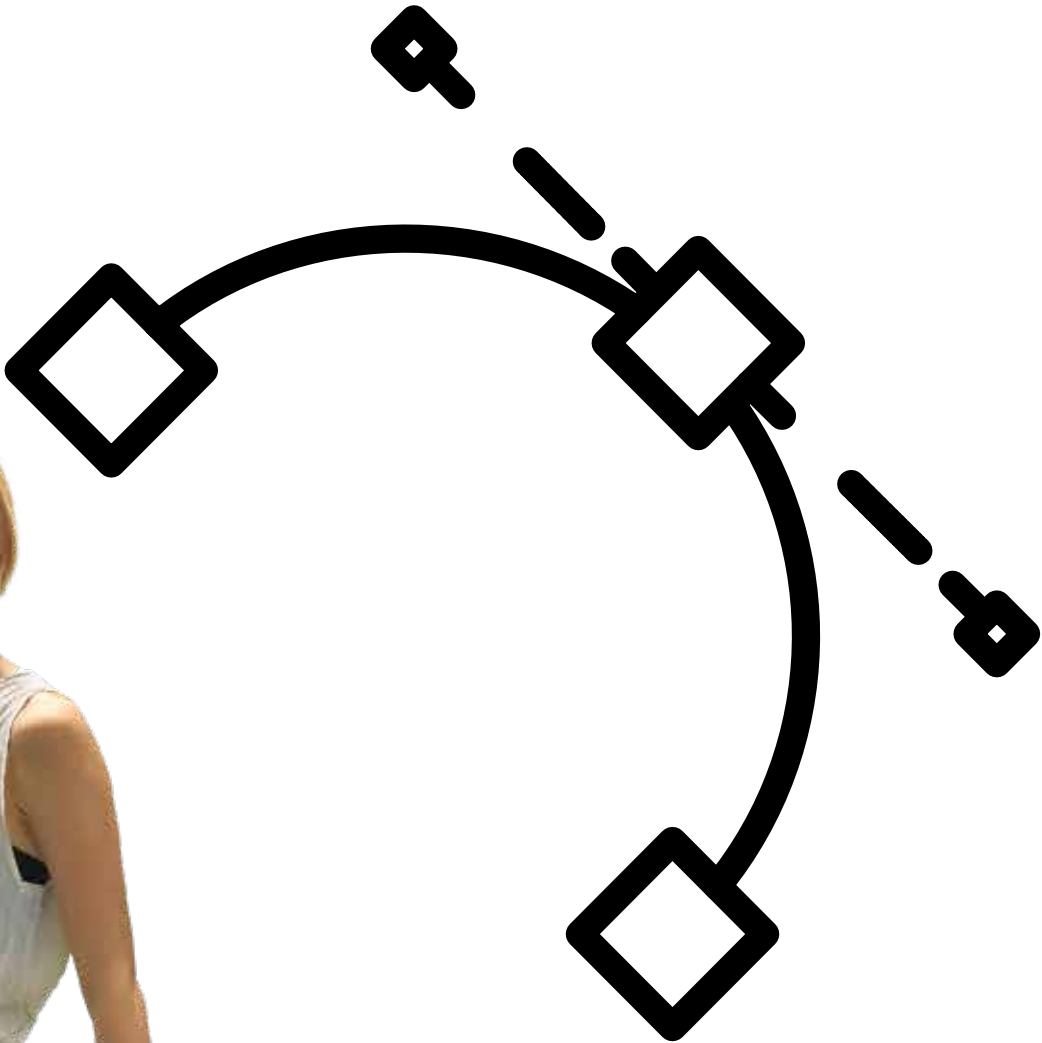

Design range caters to every demand

Link style, surface structure and colour to design garage doors with character.

Design We link functionality and aesthetics. Good design represents innovative technology to satisfy your demands. Our garage doors uncover new worlds and offer many individual design options.

The surface appearance can be easily adapted to your own home's style. In addition to the standard colours (traffic white and sepia brown) we offer trend colours at a special price. In addition, almost all RAL and NCS colours are available.

SOLID WOOD

For anyone with a passion for genuine wood. Our solid wood doors are highly resistant to weather conditions and UV radiation.

The classic, vertically ribbed panels provide your garage with an elegant, harmonious appearance.

Regardless of whether you choose a vertical or horizontal structure, the ribs on the door leaf are evenly arranged.

Vertically ribbed style

Horizontally ribbed style

Herringbone style

STEEL

We offer different door leaf surfaces for our steel doors. Choose from ribbed, panel or cassette styling to match your home and environment.

Uniform cassette design is particularly expressive and lends the door an elegant look.

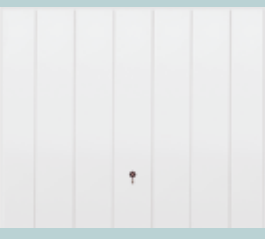

Up-and-over garage doors with panel filling lend the building's architecture a modern character.

SPECIAL SOLUTIONS

Whether single, double or a series of garages, our extensive design selection leaves room for individual designs and particular visual highlights.

There are also special solutions depending on requirements: here, e.g. up-and-over doors with a fixed upper casing

Up-and-over doors can be equipped with ventilation grilles, corrugated grilles or ventilation slots.

Up-and-over door for on-site filling

We provide the frame for individual design. Our door system allows an on-site attachment of profiled slats and other fillings so building owners and planners can implement their extraordinary ideas.

WICKET AND SIDE DOORS

We offer a matching solution for all styles, surfaces and colours. Take the opportunity and also plan your side door or a practical wicket door.

Side door equipment

- Door leaf frames made of special hollow profiles
- Filling made of galvanised steel panels or wood
- Door filling matches door
- With four-sided circumferential buffer seal
- Special lock: PC-prepared with lever/knob
- Also as 2-leaf variant at the bottom

If there is not enough space, Teckentrup offers to integrate the door into the garage door leaf.

Side doors

If you have a second access point to your garage, you can also plan a matching side door now. We offer matching solutions for all styles, surfaces and colours. If you do not have a second access point, a wicket door may be a practical alternative as the entire door does not have to be opened each time.

Certified security at all levels

Rely on added security thanks to a great package featuring many individual components. Select our innovative drives featuring many additional options to protect from burglaries or benefit from sensor-controlled ventilation options. Rely on effective LED lighting to boost your feeling of security in the garage. Benefit from anti-burglary security features, very convenient operation, high levels of durability and guaranteed quality.

Security. We link systems to protection. Our garage doors not only look secure. We go the extra mile and develop as well as integrate security concepts – always one step ahead of the requirements.

SAFE AND CONVENIENT OPERATION THANKS TO NEW DRIVE TECHNOLOGY

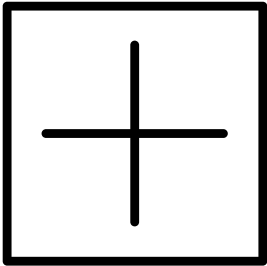

CarTeck DRIVE[®] Intelligent Teckentrup CarTeck garage door drives are **made in Germany** and are universally suitable for sectional doors and up-and-over doors. Thanks to optimised speed profiles they open and close quickly. The motor carriage moves along a tensioned chain so that neither friction, nor force cause any loss, as that would be the case with circulating chains.

Astonishingly efficient:
Energy-saving thanks to
<1 Watt consumption in
standby mode
(depends on model)

DISCOVER OUR NEW DOOR DRIVES AND YOUR MANY BENEFITS:

- Strong safety concept:**
- Automatic deactivation stops the door immediately if there are any obstructions
 - Active counterpressure if the door is violently pried open
- Improved operating convenience:**
- High speed of up to 240 mm/sec
 - Reduced head loss thanks to fast opening and closing
- Simple installation:**
- Click into the rail, no screws required
 - Only one drive belt without mechanically moving parts
- Optional accessories:**
- Lock magnet guarantees even more security
 - Intelligent control technology for numerous settings

The new Teckentrup drives convince with plenty of accessories and equipment:

- Handheld transmitter resistant to impact
- Park position laser
- Additional lighting
- Humidity sensor
- Emergency power supply
- Photocells
- Motion sensor
- Alarm buzzer

Pearl
4-channel handheld transmitter

Pearl Twin
2-channel handheld transmitter

Without LED lighting

With LED lighting

"LED" IT SHINE

The new, magnetic Teckentrup LED stripes create perfect lighting conditions in your garage. Thanks to innovative indoor LED lighting by Teckentrup your garage becomes a safe place where you can feel good. 6 000 lumen light intensity guarantee bright lighting conditions in the garage and make you feel safe. The motion sensor automatically switches the light on and off to make the arrangement even more convenient. LED technology offers efficient alternatives to conventional lighting systems. Benefit from great lighting conditions and a low power consumption.

A SURE THING – TECHNICALLY MATURE

All technical details are perfectly harmonised to guarantee quiet door motion, ease of operation and reliable safety. All doors are pre-assembled ready for quick and easy installation.

We grant a 10-year warranty on all CarTeck steel up-and-over garage doors.

We grant a 5-year warranty on our drives.

Visit www.teckentrup.biz for additional information

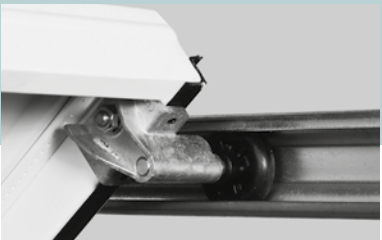

Safety spring assembly

The safety spring assembly with 3 springs prevents fingers from being trapped between the spring coils. The load distribution over multiple springs prevents the door from closing automatically.

Quiet door motion

Plastic rollers run on guiding rails and ensure a constantly smooth motion. The optimum fit of the galvanised guiding rails enables accurate and quiet door guidance.

Smooth guide

The lever arm with a plastic bearing means zero resistance when closing the up-and-over garage door. The lever arm blocks and masonry frames are positively connected and additionally screwed. An advantage that guarantees maximum stability.

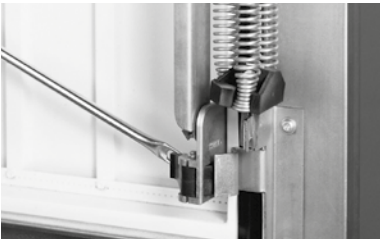

Finger pinch protection on lever arm

Standard finger pinch protection at the lever arm guarantees elements including straight-forward retrofitting on doors with electrical drive while complying with all valid safety regulations.

Finger pinch protection at the pivot point

The sealing rail combination of hard and soft plastic allows easy guidance of the door leaf and reliable finger pinch protection.

Anti-burglary locks

The concealed, double-sided lock ensures that the door closes safely and quietly. Once the door is closed, the locking system automatically locks to thus prevent unauthorised access.

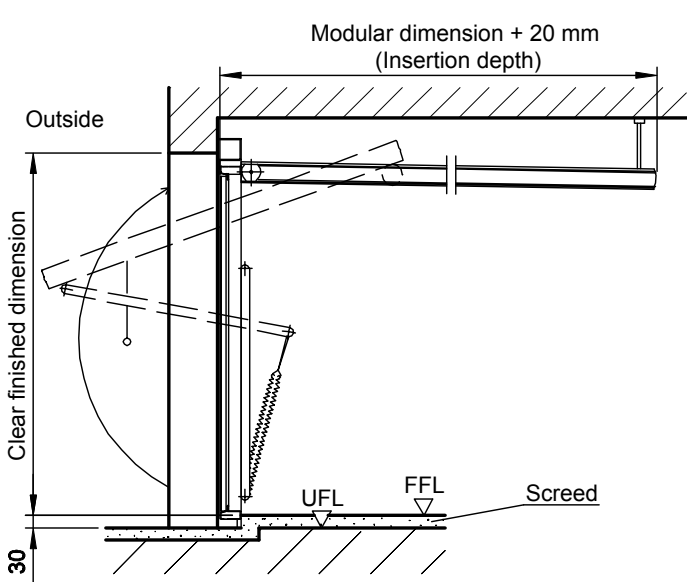

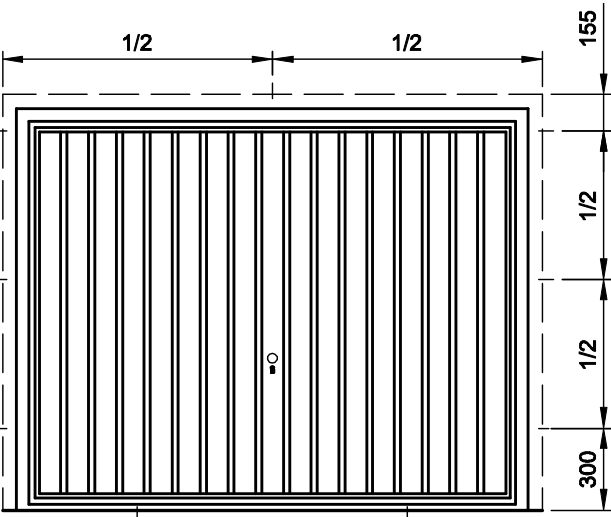

Our service for your demands

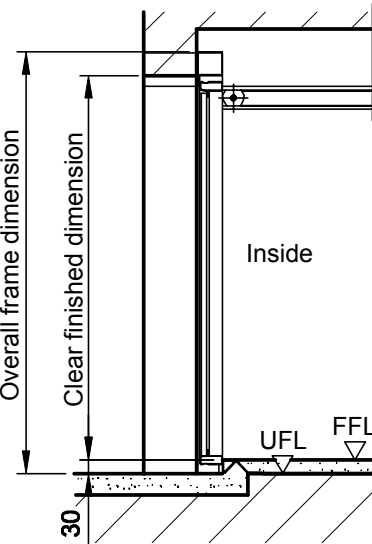

Focussing on results means to us that we find matching services for our customers. We provide plenty of advice and many major or minor service packages to suit your demands and perfectly install your CarTeck garage door. We provide qualified specialist partners near you and offer service, installation, demonstrations and maintenance – all from a single source and throughout Germany.

Service. We link speed to reliability. Together with our partners we provide everything from a single source, from on-line planning to installation. We provide expert advice and always the best service during installation and maintenance.
